Compatible with ZSmart App

Product Introduction

TL600 is a smart door lock with a digital keypad, Wi-Fi communication, and other verification methods, including fingerprint verification.

By connecting the intelligent door lock to the router via the ZSmart App, users could quickly check alarm and unlock records, share a temporary or dynamic password with their friends and relatives, and manage multiple user accounts at ease.

It is suitable for private houses, apartments, and short-term rentals. And it definitely raises the level of convenience and security control over access to your home.

Features

Works With ZSmart APP
Manages and controls multiple locks at the same time

Class-C Cylinder
Provides higher level of security and protection

Anti-theft Design
Prevents opening door through the peephole

Random Password
Secures your passwords from being exposed by latent prints remain on the device's surface

No Gateway Required
Using usual home routers is enough; no other gateway required

Temporary Password
Shares a digital password within valid time to visitors unlocking

Configuration

TL600 ⟷ Wi-Fi Router ⟷ Cloud ⟷ Smart Phone
