SpeedFace-V5

SpeedFace-V5 is a smart access control terminal equipped with the new visible light face and palm 2-in-1 technology, which applies the latest face and palm algorithms and advanced computer vision technology. It supports a variety of identification methods, including face/palm/card, etc. Besides, the terminal offers large capacity and speedy recognition.

SpeedFace-V5 eliminates hygiene concerns with contact less biometrics technology. It is also equipped with anti-spoofing algorithms for facial and palm recognition to defend against almost all types of fake photo and video attacks. Importantly, high-precision palm recognition takes only 30ms per hand. The Palm data is then compared to the maximum of 5,000 palm templates.

The terminal with advanced biometric technology, combined with face and palm recognition, provide you with a secure, flexible and efficient access solution. Besides, SpeedFace-V5 is an access control terminal featuring a video intercom function. It fully improves the video intercom experience and can be compatible with video intercom indoor unit with SIP protocol.
